INTERNSHIPS **Online Examination System**
NOMURA Research Institute FinTech Pvt. Ltd., India
January 2015 – Current

Developing an online recruitment system for the company which shall be used in the coming year for the hiring process in various colleges across India. In the first phase of the internship we are working on requirement gathering and preparation of functional documents for the product. Along with it the login Module for the system has been developed.

Technology Used: JAVA, JSP, Servlets, Spring MVC

Web Portal For Patients
UberHealth for families, India
Januray 2014 – June 2014

The work was to develop the company website both backend as well as front end, which had the functionalities where users can create a complete medical profiles of their family members and take medical tips from various doctors. The site also had an integrated payment gateway using PayPal and Zwitch API.

Technologies used: Node.js, JavaScript, HTML, CSS

PROJECTS **Blab – A Chat Client**

August 2014 – October 2014

Developed a LAN based video chat client that allowed users to have Video/Audio/Textual chats with other users over the LAN using a unique identification code assigned to the user by the system. A further extension to the project was made by adding the functionality to have video conferences over the same network.

Technologies used: Node.js, HTML, WebRTC, JavaScript

Training & Placement division Chrome Extension

July 2014 (under regular updates)

A project under training and placement division of BIT Mesra. Developed a chrome extension which notifies the users regarding the placement updates posted on TnP portal. The extension has more than 500 downloads since its release in the chrome store.

Chrome Store Link : <https://chrome.google.com/webstore/detail/bit-mesra-tnp/Kahfhbidkplnakhhgodbehpgcpdfagnd>

Technologies used: JavaScript, HTML, BootStrap (CSS, JQuery)

Network Traffic Analyzer

Prof: Dr.Abhijit Mustafi, BIT Mesra

December 2013 – Januray 2014

This project was developed in a team of 2 to help Network Department of BIT Mesra to channelize the network hardware and track the malicious activities by various users. The system generated reports of data consumption by individuals on a hostel basis. The graphical analysis helped the administrators decide the network load and durations of consumption inflections.

Technologies used: Python, Pcap and Matplotlib modules
